

**Customer information on
Adherence to the RoHS Directive 2015/863/EU**

With the directive 2015/863/EU for the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS), substance prohibitions apply to electrical and electronic devices newly brought into circulation for lead, cadmium, chromium (VI), mercury, and brominated flame-retardants.

RoHS only applies to the categories 1 to 11 listed in the attachment - large and small household appliances, IT and telecommunication devices, entertainment electronic devices, lighting fixtures, electrical and electronic tools, toys as well as sport and fitness devices, medical devices, surveillance and monitoring devices including industrial monitoring and control instruments, automatic dispensers as well as for other electrical and electronic equipment, which are not referred to in one of the previously mentioned categories.

Almost all products in the mechanical and plant engineering industries do not fall under the RoHS, such as elevators, construction machinery, cranes, machine tools etc.

Since the quick coupling systems manufactured by us are usually installed in production plants, and not in the electronic devices included in the directive, the substance prohibitions are often not relevant for the valves we deliver.

Provided that our products are relevant for the directive in your application case, we are happy to verify the adherence to the prohibition of substances for these products and if need be, to confirm the compliance.

Please indicate the order numbers of the respective coupling types, for which you require the certification.
